## Global Week Ahead — Holiday Edition

Whether Merry Christmas, Happy New Year, Hanukkah Sameach or simply happy holidays, here's wishing our clients, staff and friends the very best of the season. This double issue of the Global Week Ahead will cover the period from December 21st through to January 5th.

### ASIA-PACIFIC—LOST IN TRANSLATION?

**Progress or lack thereof toward the formal text of a US-China phase one trade deal may be further informed over the next two weeks. Nothing formal is scheduled, but watch for tweets, China's daily press briefings and media reports. The calendar-based data line-up will focus upon Chinese PMIs and Japan's monthly data dump.**

US Trade Representative Robert Lighthizer has guided that the text of a full 'phase one' agreement is complete and will be released in early January and is simply being translated, but no date has been established for its signing. Spokespersons for China's Ministry of Commerce and Foreign Ministry have generally dodged questions about the terms of the deal and ongoing negotiations with "nothing to update" references. Key questions remain unanswered such as enforcement mechanisms and milestones toward full implementation. Past alleged deals have fallen apart at the text and translation stage with the US accusing China of renegeing on its verbal agreements and China demanding tariff reductions that appear to be rather modest in the sketched outline of the current proposals.

Recall that the US has offered to cancel plans to apply a 15% tariff on US\$160 billion of Chinese imports that was to have gone into effect on December 15<sup>th</sup>, lower the 15% tariff rate on about US\$120 billion of Chinese imports to 7.5%, but keep the 25% tariff rate on the other US\$250 billion of Chinese imports that had been announced in July and August 2018 and through subsequent actions.

The quid pro quo is an unrealistic pace of Chinese buying of US exports both in aggregate that would require a massive 2¼ fold increase in total US exports within a two year period—after which there is no agreement (chart 1)—and around a fourfold increase in Chinese purchases of US agricultural commodities within two years at a US\$40–50 billion annual pace—after which there is no agreement (chart 2). There is also no further information on the breakdown of such purchases that Lighthizer has said will remain undisclosed.

Apart from simply not hitting these targets, China could conceivably twist the spirit of the deal in the following ways to get closer to the targets.

1. Stockpile enormous purchases and front-load inventories, only to slash purchases again after the two-year agreement expires. China would buy time to further adjust to trade risks in the meantime.
2. Import more and re-export it elsewhere to China's other trading partners as a substitute for the direct purchases of US goods by those other countries.
3. Divert the booking point from Hong Kong (not included in the agreement) to mainland China for imported goods.
4. Reallocate purchases away from other countries and thus weaken the global economy.
5. Since the purchase targets are in nominal US\$ terms, either pay inflated prices and/or return to past fake invoicing practices.

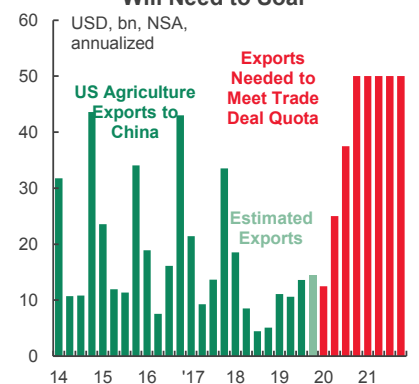

**Markets will also digest another batch of Chinese purchasing managers' indices.** On December 30<sup>th</sup>, China's state PMIs for December will be updated. The composite PMI has

Chart 1 **Good Luck Doubling US Exports to China!**

Sources: Scotiabank Economics, US Congressional Research Service.

Chart 2 **US Agriculture Exports to China Will Need to Soar**

Sources: Scotiabank Economics, US Census Bureau Trade Data.

continued to signal moderate growth led by the non-manufacturing sector as manufacturing remains flat. On January 1<sup>st</sup>, the private Caixin manufacturing PMI will be updated and then on January 5<sup>th</sup> we'll get the Caixin services and composite readings.

Other data releases will be light and principally focused upon Japan. Japan will update a variety of readings for the month of November the day after Christmas including housing starts, the jobless rate, retail sales, industrial production and Tokyo CPI for December.

### UNITED STATES—BOEING, BOEING, GONE!

With a couple of exceptions, US calendar-based risks should be fairly light over the coming two weeks. The greater safety net that the New York Federal Reserve has thrown over repo funding challenges doesn't mean there may not be volatility, but it shouldn't be as disruptive as prior episodes. Barring random developments and tweets, the next two weeks should offer relatively smooth sailing conditions. Risks surrounding further communications regarding the US-China 'phase one' trade deal are discussed in the Asia-Pacific section. The USMCA deal has passed the House of Representatives as expected, but will not sit idle until it goes to the Senate after the impeachment trial in January.

Bond markets will be shut on Christmas day and New Year's Day and will close early at 2pmET the day before each holiday. The NYSE will be shut on Christmas Day and New Year's Day and will close at 1pmET the day before Christmas.

The week of December 23<sup>rd</sup> to 27<sup>th</sup> will witness only three releases.

**New home sales:** Sales will be updated for November on Monday and will be trying to maintain the upward momentum that has been in place for most of this year.

**Durable goods orders:** It's unclear what role plane orders placed by domestic airlines will play in November's report on Tuesday. Boeing had 63 orders in November but 42 of them were from foreign carriers and 21 were from unidentified carriers. In October there were just 10 plane orders and again it's not entirely clear how many of those were for domestic airlines but at most it would be six. Airbus had 14 orders from US or undisclosed airlines in November and 30 in October. There may be a rebound in orders from auto firms after three months of decline with a GM strike in the middle. Nevertheless, markets will pay more attention to orders ex-aircraft and defense and whether there is any momentum to back the unexpected 1.2% m/m jump in October. Shipments of durable goods that matter to current Q4 GDP are being weighed down by Boeing's 737 Max issues that have driven total nondefense airplane shipments sharply lower since the FAA's suspension (chart 3). The outright suspension of production going forward could cost the US economy around a half-point on Q1 annualized GDP growth and thus bring Q1 growth down to around 1% and lean in the direction of our below consensus 1½% GDP forecast for 2020.

**Richmond Fed:** Tuesday's reading for this volatile gauge will further inform expectations for the following week's ISM-manufacturing print.

The week of December 30<sup>th</sup> to January 3<sup>rd</sup> will include two main releases on the Friday, and a smattering of other lesser reports.

**FOMC minutes:** Minutes to the FOMC's December 10<sup>th</sup>–11<sup>th</sup> meeting will be released on Friday January 3<sup>rd</sup>. A recap to the meeting is available [here](#). This should be among the duller sets of meeting minutes in quite some time. The Fed's overall communications including the statement, forecast revisions with the new dot plot, and Chair Powell's press conference were all very little changed as the Fed is unanimously agreed upon a policy hold as it assesses the lagging effects of three cuts to date.

**ISM-manufacturing:** The January reading lands on the same Friday. Little change is expected. The Markit manufacturing PMI was left flat at 52.5 in December (52.6 prior). The Empire regional gauge was also little changed at 3.5 (2.9 prior). ISM continues to hover around the low point since early 2016.

Chart 3

#### US Nondefense Aircraft Durables Shipments

Sources: Scotiabank Economics, Bloomberg.

Other releases will focus upon the Conference Board's consumer confidence index on December 31<sup>st</sup>. Pending home sales and the advance goods trade balance are out the day before, S&P Case Shiller house prices will be updated on December 31<sup>st</sup>, and then construction spending and vehicle sales are due out on Friday, January 3<sup>rd</sup>.

**EUROPE—A BREAK FROM BREXIT**

**Relatively mild data risk particularly out of Germany and only by the week after Christmas should offer relatively little to consider throughout the holiday season.**

**Brexit negotiations are on the backburner for now.** The January 31<sup>st</sup> 2021 withdrawal agreement deadline will be met by the Conservative majority following the UK election. Formal trade negotiations are expected to commence within a month or two thereafter. If an extension to the December 31<sup>st</sup> 2020 deadline for a UK-EU trade deal is sought, it must be advanced by June 30<sup>th</sup>, but PM Johnson has ruled this out at least for now. The skepticism surrounds the length of time other trade negotiations have taken (CETA, USMCA, etc.).

The week of Christmas will only bring out Spanish retail sales on Friday. The following week will be slightly more active with inflation updates for Spain (Dec 30<sup>th</sup>), and then France and Germany (January 3<sup>rd</sup>). Much of the volatility around European inflation has been driven by gasoline prices (chart 4) and the ebbing pace of gas price changes could add downside to the December readings.

German retail sales and the unemployment rate and the UK construction PMI will also be released by later that week.

**CANADA—HANDS TIED, PRAYING FOR A REBOUND?**

**Canada releases monthly GDP on the Monday before Christmas and then goes radio silent through to the week of January 6<sup>th</sup>.** It's unlikely to be a terribly merry take on the Canadian economy but at least it won't linger throughout the festivities. The Toronto Stock Exchange will close early at 1pmET on Christmas Eve and will then be shut on Christmas Day and Boxing Day on the day after plus New Year's Day. Canadian bond markets will be shut on Christmas Day, Boxing Day and New Year's Day and will close early at 1pmET on Christmas Eve and New Year's Eve.

**GDP was probably little changed in October over September.** We estimate a decline of 0.1% m/m with possibly minor upside risk. To the downside, housing starts fell by 9.3% m/m and manufacturing shipment volumes fell by 0.4% m/m. Hours worked were little changed (+0.1%) and book-ended by declines of 0.3% m/m in both September and November. After a large 3.4% q/q jump in hours worked during Q2, they've since roughly stalled out with a ½% rise in Q3 and tracking of a ½% decline in Q4. Wholesale trade volumes fell by 1.1% m/m. Retail trade volumes plunged by 1.4% m/m and extended a lengthy period of softness ([recap here](#)). Upside risk could be presented by soft jumping off points in sectors that could rebound in October but that are more difficult to track with higher frequency measures in advance, such as agriculture, utilities and transportation. The Canadian economy is tracking growth of only around ¼% in seasonally adjusted and annualized terms using Scotia's 'nowcast' ([here](#)) after growing by just 1.3% in Q3, 3½% in Q2 and under 1% in each of the prior two quarters.

**As chart 5 demonstrates, the trends for GDP growth as well as final domestic demand—that removes from GDP volatile net trade and inventory components—have not been very flattering to Canada for quite some time.** GDP growth has only had one stand-out quarter (2019Q2) during the past five quarters including tracking through to 2019Q4 with trend actual GDP growth generally riding below potential GDP growth with the sole exception of the transitory factors that boosted Q2 growth. Final

Chart 4

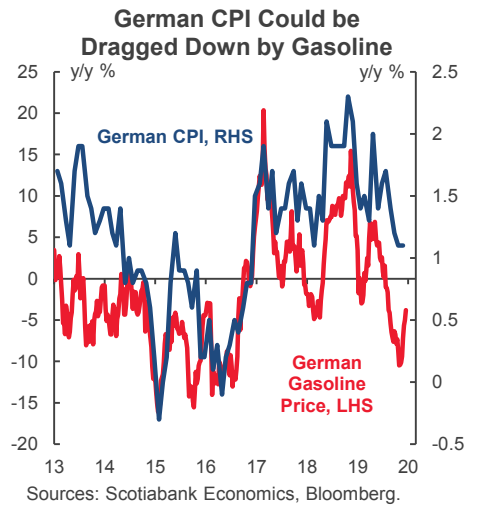

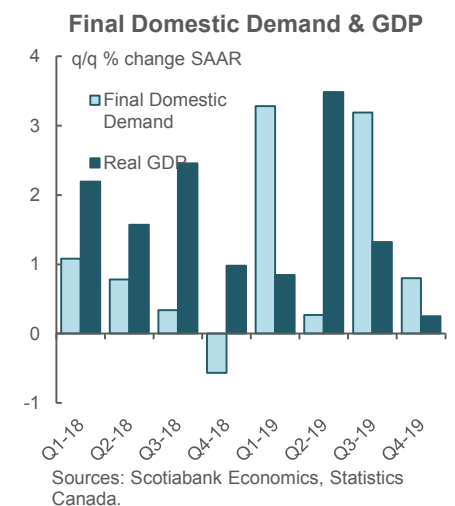

Chart 5

domestic demand has grown by about 1% or less at an annualized rate in six of the past eight quarters including tracking for 2019Q4.

Against this backdrop, Canada faces an awkward balancing act into 2020. Activity variables including broad GDP growth have undeniably soured, yet 'core' inflation has jumped to the highest rate in about a decade, albeit with potentially transitory drivers ([here](#)). The result could put monetary policy in a straightjacket at least for a time until one of two things happen: either growth firmly rebounds over 2020H1—but it's not clear this will happen—or the BoC gets increasingly concerned about the durability of the inflation target on slack arguments and casts aside backward-looking inflation data to ease. We continue to think that the latter is more likely. At the same time, fiscal policy may be in a straightjacket. Several provincial governments are thus far offering neutral to contractionary fiscal policies. The Federal Finance Minister's mandated 31% debt-to-GDP ratio is getting very close and in the context of recent bigger-than-expected deficits (recap [here](#)) which also limits any potential for meaningful fiscal stimulus. While the C\$ has appreciated recently, the risk could fall back upon the currency to behave as a bigger shock absorber into 2020.

### **LATIN AMERICA—A PAIR OF DEUCES**

Latin American markets will face very light developments straight through the next two weeks. There is nothing on tap for the week of Christmas and little ahead for the second week.

**The week of December 30<sup>th</sup> to January 3<sup>rd</sup> puts most of the focus upon a pair of inflation reports from Chile and Peru.**

Chile's inflation data might arrive toward the end of the week or into the following week. The headline rate has been rising from a low of 1.7% y/y in February to a full point higher in November and closer to the mid-point of the central bank's 2–4% inflation target range. Peru's inflation rate arrives on New Year's Day no less and should be little changed from the sub-2% target readings of late but with core inflation running around 2 ¼%.

This report has been prepared by Scotiabank Economics as a resource for the clients of Scotiabank. Opinions, estimates and projections contained herein are our own as of the date hereof and are subject to change without notice. The information and opinions contained herein have been compiled or arrived at from sources believed reliable but no representation or warranty, express or implied, is made as to their accuracy or completeness. Neither Scotiabank nor any of its officers, directors, partners, employees or affiliates accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or its contents.

These reports are provided to you for informational purposes only. This report is not, and is not constructed as, an offer to sell or solicitation of any offer to buy any financial instrument, nor shall this report be construed as an opinion as to whether you should enter into any swap or trading strategy involving a swap or any other transaction. The information contained in this report is not intended to be, and does not constitute, a recommendation of a swap or trading strategy involving a swap within the meaning of U.S. Commodity Futures Trading Commission Regulation 23.434 and Appendix A thereto. This material is not intended to be individually tailored to your needs or characteristics and should not be viewed as a “call to action” or suggestion that you enter into a swap or trading strategy involving a swap or any other transaction. Scotiabank may engage in transactions in a manner inconsistent with the views discussed this report and may have positions, or be in the process of acquiring or disposing of positions, referred to in this report.

Scotiabank, its affiliates and any of their respective officers, directors and employees may from time to time take positions in currencies, act as managers, co-managers or underwriters of a public offering or act as principals or agents, deal in, own or act as market makers or advisors, brokers or commercial and/or investment bankers in relation to securities or related derivatives. As a result of these actions, Scotiabank may receive remuneration. All Scotiabank products and services are subject to the terms of applicable agreements and local regulations. Officers, directors and employees of Scotiabank and its affiliates may serve as directors of corporations.

Any securities discussed in this report may not be suitable for all investors. Scotiabank recommends that investors independently evaluate any issuer and security discussed in this report, and consult with any advisors they deem necessary prior to making any investment.
